Education

Indian Institution of Technology Madras Chennai, India BS in Data Science and Applications
(Current CGPA 8.53 - Diploma level) 2028

Experience

XR Developer & 3D Visualization Intern

Sudha Gopalakrishnan Brain Centre, IIT Madras | May 2026 – Aug 2026

- Developed *interactive XR and 3D web applications* tailored for medical visualization using Three.js, Unity, C#, and Node.js.
- Engineered an AI-assisted neuro-visualizer with *250+ optimized brain models*, implementing GLSL shaders for real-time neural activation.
- Designed vascular simulation tools for stroke analysis leveraging *Three.js, Vite, and GSAP* for fluid 3D interactions.
- Created *VoxelRoom*, a Meta Quest 3 VR app enabling volumetric rendering and 2D slice interaction for multi-sequence MRI.
- Managed *NIfTI data pipelines* and 3D mesh generation using FastAPI to bridge XR frontends with AI segmentation models.
- Investigated *multiplayer XR architectures* utilizing OpenXR, Meta XR SDK, and Photon Fusion for collaborative environments.

Projects

Project PokeAI | Godot Engine, C#

- Designed a modular top-down framework for creature-centric games utilizing a *state-machine architecture*.
- Engineered core systems including *grid-based movement*, animation state management, *dynamic day-night cycles*, and cross-fading audio.
- Designed a scalable foundation to facilitate advanced *AI-driven NPC interactions* and interactive gameplay systems.

Pi NAS | Go, HTML

- Built a self-hosted file server on a Raspberry Pi 5, an IoT-class single-board computer, storing data on a SATA SSD salvaged from a laptop with a dead logic board (mounted via USB enclosure).
- Single Go binary + Caddy HTTPS proxy, ~40MB RAM, 16MB image, no database — the file system itself is the index.
- Supports per-user private storage, drag-and-drop uploads, and bcrypt/HMAC-secured authentication.

Treasure Hunt Physics Sandbox | Unity, C#

- Developed a 3D interaction framework featuring raycasting, hover detection, and orbital camera mechanics with state-driven UI logic.

ML & Web Applications | Python, APIs

- Developed a *Naive Bayes-based SMS Spam Classifier* alongside various web tools leveraging data handling and backend logic via APIs.

Dungeons and Goblins / Java

- Terminal-based RPG in Java built to apply OOP fundamentals: classes, encapsulation, and enums structuring weapons and enemies, with a GameManager-driven game loop and ArrayList/Iterator for combat state.

Leadership & Activities

Paradox, IIT Madras | 2025 – Present

Multimedia Core

Previously Super Coordinator — VFX & 3D

- Oversee the end-to-end multimedia operations for Paradox, coordinating teams, managing project timelines and deliverables, and ensuring the smooth execution of visual and media requirements across the fest.
- Manage cross-functional responsibilities including sponsor deliverables, MOU completion, team coordination, and operational follow-ups to ensure commitments and projects are completed on schedule.

Skills & Interests

Programming: Python, C#, Java, C, JavaScript

3D & XR: Three.js, Unity, Godot, Blender, GLSL, OpenXR, Meta XR SDK

Development: FastAPI, Node.js, REST APIs, Git, Docker, 3D Slicer

Creative: After Effects, Premiere Pro, DaVinci Resolve, Cascadeur, Substance Painter

Interests: Creative Technology, XR/VR, Game Development, Startup & Product Building, Embedded Systems & Raspberry Pi, AI & Interactive Systems
