

Jaiwardhan Panwar

Full-stack and applied ML engineer · Technical co-founder,
Studio MH02 LLP

Developer who builds products end to end, from schema to deployment. Sole engineer behind MH-02, a production ERP for Indian service businesses, and first-place winner at Paradox with a multi-agent LLM honeypot. Studying data science at IIT Madras and working toward AI safety research.

1st place

Paradox Agentic AI Hackathon, SIES College, Navi Mumbai
Out of 6,000+ participants, with Project Argus

EXPERIENCE

Technical Co-founder & Software Developer Mar 2026 - Now
Studio MH02 LLP · Mumbai

- Sole developer of MH-02, an 11-module ERP for Indian service businesses, on FastAPI (async SQLAlchemy 2.0), PostgreSQL, Redis, Celery and Vue 3.
- Built GST-compliant PDF invoicing with WeasyPrint, and ship each client as an isolated Docker Compose stack behind Caddy and Cloudflare Tunnel.
- Set the commercial model (one-time license plus annual maintenance) and wrote the pitch deck and demo script used in client sales.

Freelance Web Developer Aug 2025 - Mar 2026
Self-employed · Mumbai

- Delivered landing pages, Shopify stores and pre-launch pages, including a luxury brand storefront planned around its launch campaign.
- Found clients through cold calls and cold email, and built my own service catalogue and pricing sheets for proposals.

UI/UX Design Intern Jul - Aug 2025
Cosmic Soul · Chennai

- Designed 15+ high-fidelity, accessibility-focused web pages for a mental health platform.
- Ran user research that used psychological insight to shape empathetic, role-appropriate interfaces.

PROJECTS

Project Argus 1st place, Paradox
FastAPI · Groq LLaMA 3.3 70B · Redis · Docker · GitHub Actions

- API honeypot that leads attackers into a fake environment of credentials, database dumps and configs while profiling how they behave.
- Four-agent LLM security council (Sentinel, Archon, Mirage, Oracle) with a reinforcement learning loop that adapts its deception to live traffic.
- Hardened past the demo: JWT auth with role-based access, Redis-backed threat state, GeoIP attack map, and CI/CD with secret-leak scanning.

ML from Scratch Ongoing
Python · NumPy · scikit-learn

- Writing linear and ridge regression, PCA, k-means++, logistic regression, Naive Bayes and GMM/EM by hand in NumPy, each checked against scikit-learn.

EDUCATION

BS in Data Science and Applications
IIT Madras · 2024 - 2028
CGPA 7.5

Coursework: ML Foundations, ML Techniques, ML Practice, Modern App Development II, Tools in Data Science, Deep Learning and GenAI

SKILLS

ML and AI
Python, PyTorch, Transformers, NumPy, scikit-learn, reinforcement learning, LLM agents

Backend
FastAPI, Flask, SQLAlchemy, PostgreSQL, Redis, Celery, REST APIs, JWT and RBAC

Frontend
Vue 3, React, Next.js, Flutter / Dart, Shopify, UI/UX design

Infra
Docker Compose, GitHub Actions, Caddy, Cloudflare Tunnel, Linux VPS

ALSO BUILT

Hospital Management System:
Flask-Login RBAC for admins, doctors and patients

Headless store on Medusa.js:
products, inventory, cart, orders

IoT energy monitor: ESP32, PZEM-004T and a live web dashboard
